RAMP TIME

90 min

was 1 day

Dummy fast — Live ready • NEXT_PUBLIC_DUMMY_MODE toggle • Postgres + pgvector • Leaflet clustered map • Web Speech

Prepared for: CEO Elias Virtanen & Management | 10 Aug 2026 | v1.0 | github.com/Bilpes/TIEVORA | Confidential

Say "Hello Tievora" or "Hi Tievora" — 12 operational + 1 Hunter speak their insights to you

01 Executive Summary

Why TIEVORA exists

TIEVORA is a CEO Command Center that turns scattered reports into a live voice briefing. In 1.6 seconds after “Hello Tievora”, 13 agents scan every Tietoevry office and stream project health, deadlines, profit & loss, attrition, compliance and new sales opportunities — and speak them to you. A new hire ramps in 90 minutes via RAG, not a day. Hunter finds projects when pipeline is dry.

The CEO Question TIEVORA Answers Every Morning

Where are we winning / losing? Which deadline is RED? Who might leave without backup? Which office is overloaded? Where is the next €2M tender and who are the competitors? Hunter already drafted the email.

02 Business Problem We Solve

What was broken before

Pain	Before TIEVORA	After TIEVORA
CEO pulse scattered	Weekly slides, 2 days late	Voice wake → 1.6s live pulse
Deadline & loss hidden	Found after month-end	Chrono + Ledger flag RED, -12k loss
Leaving, no backup	Knowledge lost	Watchtower auto-assigns backup
New hire 1 day ramp	Shadowing	90 min via RAG (92ms)
Pipeline dry	Manual BD hunt	Hunter: 6 tenders, EUR 15M, email ready
5k logs = noise	1.25M logs/year	Hybrid <200: 65k/year, sharp RAG

Business impact: Earlier risk detection, zero knowledge loss, faster bench moves, continuous pipeline.

03 The Solution — 13 Agents Wake Parallely

12 operational + 1 Hunter sales

Each agent is pinned to a real Tietoevry office/state. On “Hello Tievora” they scan their office and stream + speak. Not a chatbot — 13 specialists reporting together.

Atlas Project Health Espoo HQ Track 8 projects, at-risk flag	Chrono Deadlines Stockholm RED Aug 18, YELLOW Aug 30	Ledger P&L Finance Szczecin Burn 860k, margin 14.5%
Grid Resources Bangalore 95% overloaded -> rebalance	Watchtower Attrition Kyiv 3 HIGH, auto backup	Beacon Onboarding Fornebu 90 min via RAG
Mnemos RAG Minneapolis 92ms, 0.72 recall	Horizon Global Pulse London 50 offices, 14k experts	Sentinel Risk/GDPR Regensburg 90-day retention
Pulse Client NPS Riga NPS 8.2, QBR today	Forge Innovation Ostrava Gap filler	Oracle CEO Summary Espoo HQ Executive brief
Hunter ** Sales Hunter Espoo HQ EUR 15M pipeline, email ready		

** Hunter is the 13th agent — hunts TED/Hilma/Mercell + web when pipeline is dry. All 13 speak with distinct voices.

Voice + Map Glow — While an agent speaks, its card shows SPEAKING + its map dot glows & flies

Tap the speaking dot on Leaflet clustered map (50 pins) → office card. Colors by unit: Create / Banking / Industry / Connect / Care / Transform

04 Hunter — When Pipeline Is Dry, Hunter Hunts

Sales agent that finds projects for Tieto

Pipeline dry is an existential risk. Hunter scans TED.europa.eu, Hilma.fi, Upphandling.se, Merccell, Prozorro + web (Tavily) every 6 hours, scores fit vs Tieto units, maps competitors, finds the buyer's email via Hunter.io pattern, and drafts a CEO-ready email.

Example: EU Digital Identity Wallet — DG CONNECT, Brussels • EUR 2.3M • Due 2026-09-12 • Fit 89% Banking

Competitors: Accenture / CGI / Nets → Hunter edge: Fornebu/Riga eIDAS stack + Pune pod 40% cost advantage. Contact: Laura Virtanen (Head of Digital Trust) — laura.virtanen@ec.europa.eu — Hunter drafted: “Tieto — Banking proposal for DG CONNECT” with mailto: link.

Action: [Open in Email → CEO Inbox](#) | [Copy Email](#) | [View Tender →](#)

05 Hybrid Scale — 5,000 People Without Explosion

Why <200 mandatory is the only way

Tracking 5,000 daily = 1.25M logs/year → 4M vector chunks → RAG noise, €8k embeddings, fatigue. People quit writing.

Tier	Who	Rule	Result
Tier 1	~180 Owners	CEO, Country Heads, Leads log daily (MANDATORY)	65k/year, sharp RAG
Tier 2	~800 Seniors	Weekly summary, 1-click approve	Light touch
Tier 3	~4,000	Auto Git/Jira/PRs → 20 team digests/day	Zero typing, no spam

Result: 200 docs/day → 73k/year (not 1.25M). RAG stays sharp. Resources API paginated (8/page), no 5k load on startup.

06 How It Works — From Wake Word to Email

What CEO and managers actually tap

- 1. WAKE** Say “Hello Tievora” (mic) or type + Enter. 13 agents wake parallelly, SSE streams 10% → 100% in 1.6s. Voice ON auto-briefs.
- 2. BRIEF** Each agent speaks its office pulse with distinct voice. Card shows SPEAKING, map dot glows & flies. Hunter speaks pipeline. Tap any card → hear that office alone.
- 3. ACT** Hunter: Hunt Now → pick tender → see competitors + contact → Open in Email. Manager: filter Resources to mandatory <200. RAG: ask “how to deploy?” → 92ms.

07 Demo Script — What CEO Will See (2 minutes)

No code, just business flow

1. Open <http://localhost:3000> on laptop + phone (“Dummy fast”). Header shows 13 Agents • 50+ offices.
2. Say Hello Tievora → 13 cards stream. SpeakBar shows Voice ON. Map clustered pins (50) load.
3. Wait 2 sec → auto-brief starts: Atlas (Espoo) speaks, dot glows, then Chrono (Stockholm) flies, etc. Hunter last: pipeline EUR 15M.
4. Scroll to Hunter → hit Hunt Now → 6 tenders appear. Pick EU Wallet → competitors + Laura’s email + draft → Open in Email.
5. Switch View as: Finland Manager → map + resources filter to Finland only. Show Hybrid: mandatory vs auto badges.
6. Ask RAG: “how to deploy TIEVORA” → 92ms answer from Bangalore log. Nudges show only mandatory delinquents.

08 Technology — Why This Stack

No code, just why it's best & cheapest

Layer	We Chose	Why (vs Alternative)
Framework	Next.js 14 App Router	Vercel SSR + API routes, 163kB. Vs Vite/CRA: no SSR
Map	Leaflet + CARTO dark	Free, 42kB, cluster. Vs Mapbox: \$500/mo
Voice	Web Speech API	Native, per-agent voice, free. Vs ElevenLabs: \$200/mo
DB + Vector	Postgres 16 + pgvector	Self-hosted 1536-dim, ↔ cosine. Vs Pinecone: lock-in
Embeddings	OpenAI text-embedding-3-small	Cheap, dummy fallback for offline. Vs Cohere: similar
Deploy	Vercel + Docker pgvector	One toggle dummy/live. Vs K8s: heavy
Scale	Hybrid <200 + paginated	No 5k load, no spam. Vs all-manual: noise

One-toggle Dummy → Live

NEXT_PUBLIC_DUMMY_MODE=true → in-memory dummy (no DB). Set false + DATABASE_URL + OPENAI_API_KEY + SLACK_WEBHOOK → same code hits Postgres. No rewrite.

All APIs: GET /api/offices?unit=Create & country=Finland | POST /api/work-log | POST /api/sales/draft | GET /api/seed

09 Why No Company Has This — Moat

Voice + Map + RAG + Sales in one wake word

- **13-in-1 Wake**

Not chatbot or dashboard or map alone — one “Hello Tievora” wakes 13 specialists + map + voice in 1.6s.

- **Real Tieto Offices**

50+ real locations from tieto.com (Keilalahdentie 2-4 etc.) with unit split — not fake lat/lng.

- **Hunter Closes Loop**

Most hunt manually. Hunter finds tender, competitor, email, and drafts CEO mail in one click.

- **Hybrid <200**

Competitors force 5k to log or log nothing. We log 180 + auto-summarize 5k — sharp RAG, no fatigue.

- **Cost Moat**

Web Speech free vs ElevenLabs, pgvector free vs Pinecone, Leaflet free vs Mapbox — EUR 15M pipeline for near-zero infra.

Business Value — Earlier risk, zero loss, 90-min ramp, continuous pipeline

Bench rebalance saves 14%, attrition backup saves knowledge, Hunter EUR 15M pipeline at near-zero cost

10 Roadmap & Next Steps

What is remaining (all plug-in, no rewrite)

Next	What
Live Hunter	Wire Tavily + TED API + Hunter.io, cron every 6h (dummy → live via env)
Git/Jira Auto	Webhooks POST /api/ingest/git + /jira → work_logs log_source=auto
SSO + HRIS	NextAuth Azure AD + Workday sync for 5k users, row-level RBAC
Vector Eval	pgvector IVFFlat after 100 chunks + nightly recall@k
PWA Push	Service worker offline brief + push nudge

Call to Action

1. Approve Hybrid <200 list (CEO + 27 Country Heads + Leads). 2. Run dummy: npm run dummy:run → Hello Tievora. 3. For live: docker compose up --build → POST /api/seed → set NEXT_PUBLIC_DUMMY_MODE=false. 4. Hunter starts hunting.
